Clinical Examination before participation in a dog exhibition

Pursuant to Section 10 (1) No. 2 Tierschutz-Hundeverordnung (German Animal Welfare Regulation for the Protection of Dogs), it is forbidden to show dogs in which, through genetic causes,

- body parts or organs needed for natural use by the animal are lacking or unfit for purpose or reshaped, resulting in pain, suffering or harm,
- behavioural disturbances, associated with suffering, occur,
- any natural contact with other dogs results in pain or avoidable suffering or harm for themselves or another dog.

For the purpose of identifying dogs with the abovementioned pathologic conditions, a clinical examination by a veterinarian is performed and the findings are documented on this form. Regardless of the results of the examination, dogs with diseases according to Section 10 (1) No. 2 Tierschutz-Hundeverordnung can be excluded from the exhibition by the organizer or the relevant authorities.
